Overall summary

Letter from the Chief Inspector of General Practice

We carried out an announced comprehensive inspection at Dr Jabbar and Partners (also known locally as Lee House Surgery) on 15 June 2016. Overall the practice is rated as good.

Specifically, we found the practice good for providing safe, effective, caring, responsive and well led services.

Our key findings across all the areas we inspected were as follows:

- Staff understood and fulfilled their responsibilities to raise concerns, and to report incidents and near misses. The majority of information about safety was recorded, monitored and reviewed.
- Risks to patients were assessed and well managed.
- We found that completed clinical audits cycles were driving positive outcomes for patients.
- Staff assessed patients' needs and delivered care in line with current evidence based guidance. Staff had the skills, knowledge and experience to deliver effective care and treatment.
- Patients said they were treated with compassion, dignity and respect and they were involved in their care and decisions about their treatment.
- Information about services and how to complain were available and easy to understand.
- Results from the national GP patient survey showed that some patients said they were not able to always see or speak to their preferred GP when compared to the local and national averages. However, patients we spoke with on the day of inspection informed us they were able to make an appointment with a named GP when they needed them.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- Anti-coagulation clinic (An anti-coagulant is a medicine that stops blood from clotting) was offered onsite, meaning 77 patients who required this service did not have to travel to local hospitals.
- There was a clear leadership structure and staff felt supported by management. The practice proactively sought feedback from staff and patients, which it acted on.
- The provider was aware of and complied with the requirements of the Duty of Candour.

Summary of findings

The areas where the provider should make improvements are:

- Review and improve the system in place to promote the benefits of bowel screening in order to increase patient uptake.
- Review patients feedback regarding the availability of pre-bookable appointments with their preferred GP.

Professor Steve Field (CBE FRCP FFPH FRCGP)
Chief Inspector of General Practice

Summary of findings

The five questions we ask and what we found

We always ask the following five questions of services.

Are services safe?

The practice is rated as good for providing safe services.

- There was an effective system in place for reporting and recording significant events. Staff understood their responsibilities to raise concerns, and to report incidents and near misses.
- Lessons were learnt from significant events and communicated widely to support improvement including sharing with other local practices.
- When there were safety incidents, patients received reasonable support, truthful information, a verbal and written apology and are told about any actions to improve processes to prevent the same thing happening again.
- The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse.
- Risks to patients were assessed and well managed.
- Fridge temperatures were recorded daily.
- There was an infection control protocol in place and infection control audits were undertaken regularly.

Good

Are services effective?

The practice is rated as good for providing effective services.

- Data from the Quality and Outcomes Framework (QOF) showed patient outcomes were above average for the local Clinical Commissioning Group (CCG) and compared to the national average.
- Staff assessed need and delivered care in line with current evidence based guidance.
- Clinical audits demonstrated quality improvement.
- Staff had the skills, knowledge and experience to deliver effective care and treatment.
- There was evidence of appraisals and personal development plans for all staff.
- The practice's uptake of the national screening programme for cervical and breast cancer screening were above national average. However, bowel screening uptake was below the national average. For example, bowel screening uptake was 53%, compared to the national average of 58%.
- Staff worked with multidisciplinary teams to understand and meet the range and complexity of patient's needs.

Good

Summary of findings

Are services caring?

The practice is rated as good for providing caring services.

- Data showed that patient outcomes were mixed compared to others in locality for several aspects of care.
- Patients said they were treated with compassion, dignity and respect and they were involved in decisions about their care and treatment.
- Information for patients about the services available was easy to understand and accessible.
- We also saw that staff treated patients with kindness and respect, and maintained confidentiality.

Good

Are services responsive to people's needs?

The practice is rated as good for providing responsive services.

- It reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group to secure improvements to services where these were identified. For example, anti-coagulation clinic (An anti-coagulant is a medicine that stops blood from clotting) was offered onsite, meaning 77 patients who required this service did not have to travel to local hospitals.
- The practice had organised an obesity and diabetes awareness talking session in partnership with The Princess Margaret Hospital delivered by external specialist practitioners.
- The practice had carried out demand and capacity audit to identify trends and demands for appointments on specific days and reviewed their appointment system.
- Results from the national GP patient survey showed that some patients said they were not able to always see or speak to their preferred GP when compared to the local and national averages. However, patients we spoke with on the day of inspection informed us they were able to make an appointment with a named GP when they needed them.
- We checked the online appointment records of three GPs and noticed that the next pre-bookable appointments with named GPs were available within two weeks.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- Information about how to complain was available and easy to understand and evidence showed the practice responded quickly to issues raised. Learning from complaints was shared with staff and other stakeholders.

Good

Summary of findings

- The practice worked closely with other organisations and with the local community in planning how services were provided to ensure that they meet people's needs.

Are services well-led?

The practice is rated as good for being well-led.

- There was a clear vision and strategy to deliver high quality care and promote good outcomes for patients. Staff were clear about the vision and their responsibilities in relation to this.
- There was a clear leadership structure and staff felt supported by management. The practice had a number of policies and procedures to govern activity and held regular governance meetings.
- There was an overarching governance framework which supported the delivery of the strategy and good quality care. This included arrangements to monitor and improve quality and identify risk.
- The practice was aware of and complied with the requirements of the Duty of Candour. The partners encouraged a culture of openness and honesty. The practice had systems in place for knowing about notifiable safety incidents.
- The practice proactively sought feedback from staff and patients, which it acted on. There was an active patient participation group.
- There was a strong focus on continuous learning and improvement at all levels.

Good

Summary of findings

The six population groups and what we found

We always inspect the quality of care for these six population groups.

Older people

Good

The practice is rated as good for the care of older patients.

- The practice offered proactive, personalised care to meet the needs of the older patients in its population.
- It was responsive to the needs of older patients, and offered home visits and urgent appointments for those with enhanced needs.
- The practice was one of the pioneers of elderly surveillance in the CCG area and had a dedicated nurse care coordinator for older patients.
- There was a register to effectively support patients requiring end of life care.
- There were good working relationships with external services such as district nurses.
- During winter months one of the trainee GPs had led a CCG initiated project which involved identifying vulnerable patients during winter period and drawing up shared management plans to maintain their independence.
- The premises was accessible to those with limited mobility.
- The premises was grade II listed building so the practice was limited in the structural changes they could make. However, the practice had added a ramp to the rear entrance and there was intercom to alert staff to help with the doors.

People with long term conditions

Good

The practice is rated as good for the care of people with long-term conditions.

- There were clinical leads for chronic disease management and patients at risk of hospital admission were identified as a priority.
- Longer appointments and home visits were available when needed.
- All patients with long term conditions had a named GP and the practice was following the 'house of care' approach to carry out a structured annual review to check that their health and medicines needs were being met.

Summary of findings

- For those patients with the most complex needs, the named GP worked with relevant health and care professionals to deliver a multidisciplinary package of care.

Families, children and young people

Good

The practice is rated as good for the care of families, children and young patients.

- There were systems in place to identify and follow up children living in disadvantaged circumstances and who were at risk, for example, children and young patients who had a high number of A&E attendances.
- Immunisation rates were high for all standard childhood immunisations.
- Patients told us that children and young patients were treated in an age-appropriate way and were recognised as individuals.
- The practice's uptake for the cervical screening programme was 85%, which was higher than the national average of 82%.
- Appointments were available outside of school hours and the premises were suitable for children and babies.
- We saw good examples of joint working with midwives, health visitors and school nurses.
- The practice had organised a successful children painting competition to engage and familiarise children with the practice environment.

Working age people (including those recently retired and students)

Good

The practice is rated as good for the care of working-age patients (including those recently retired and students).

- The needs of the working age population, those recently retired and students had been identified and the practice had adjusted the services it offered to ensure these were accessible, flexible and offered continuity of care.
- The practice was proactive in offering online services as well as a full range of health promotion and screening that reflects the needs for this age group.
- Extended hours appointments were available every Wednesday morning from 7am to 8am. In addition, the practice offered extended hours appointments Monday to Friday from 6.30pm to 9pm, and every Saturday from 9am to 12pm and Sunday from 2pm to 7pm at Kings Edward Hospital and Saint Marks Hospital (funded by Prime Minister's Access Fund).

Summary of findings

People whose circumstances may make them vulnerable

Good

The practice is rated as good for the care of patients whose circumstances may make them vulnerable.

- The practice held a register of patients living in vulnerable circumstances including homeless patients, travellers and those with a learning disability.
- It offered annual health checks for patients with learning disabilities. Health checks and care plans were completed for 16 patients out of 17 patients on the learning disability register.
- Longer appointments were offered to patients with a learning disability.
- The practice regularly worked with multi-disciplinary teams in the case management of vulnerable patients.
- It had told vulnerable patients about how to access various support groups and voluntary organisations.
- Staff knew how to recognise signs of abuse in vulnerable adults and children. Staff were aware of their responsibilities regarding information sharing, documentation of safeguarding concerns and how to contact relevant agencies in normal working hours and out of hours.

People experiencing poor mental health (including people with dementia)

Good

The practice is rated as good for the care of patients experiencing poor mental health (including people with dementia).

- Performance for dementia face to face review was comparable to the CCG and national average. The practice had achieved 82% of the total number of points available, compared to 83% locally and 84% nationally.
- 88% of patients experiencing poor mental health were involved in developing their care plan in last 12 months.
- The practice regularly worked with multi-disciplinary teams in the case management of patients experiencing poor mental health, including those with dementia.
- The practice had told patients experiencing poor mental health how to access various support groups and voluntary organisations.
- Systems were in place to follow up patients who had attended accident and emergency, when experiencing mental health difficulties.
- Staff had a good understanding of how to support patients with mental health needs and dementia.

Summary of findings

What people who use the service say

The national GP patient survey results published on 7 January 2016 showed the practice was performing better than the local and the national averages. There were 104 responses and a response rate of 36%.

- 94% of patients found it easy to get through to this practice by phone compared with a CCG average of 74% and a national average of 73%.
- 94% of patients were able to get an appointment to see or speak to someone the last time they tried compared with a CCG average of 87% and a national average of 85%.
- 86% of patients described the overall experience of their GP practice as good compared with a CCG average of 85% and a national average of 85%.

- 80% of patients said they would definitely or probably recommend their GP practice to someone who has just moved to the local area compared with a CCG average of 77% and a national average of 78%.

As part of our inspection we also asked for CQC comment cards to be completed by patients prior to our inspection. We received 45 comment cards which were all positive about the standard of care received. We spoke with 10 patients and one patient participation group (PPG) member during the inspection. Patients we spoke with and comments we received were all positive about the care and treatment offered by the GPs and nurses at the practice, which met their needs. They said staff treated them with dignity and their privacy was respected. They also said they always had enough time to discuss their medical concerns.

Areas for improvement

Action the service SHOULD take to improve

- Review and improve the system in place to promote the benefits of bowel screening in order to increase patient uptake.
- Review patients feedback regarding the availability of pre-bookable appointments with their preferred GP.

Dr Jabbar & Partners (Lee House Surgery)

Detailed findings

Our inspection team

Our inspection team was led by:

Our inspection team was led by a CQC Lead Inspector. The team included a GP specialist advisor, a second CQC inspector, a CQC assistant inspector and an Expert by Experience. This is a person who has personal experience of using or caring for someone who uses this type of service.

Background to Dr Jabbar & Partners (Lee House Surgery)

The Dr Jabbar and Partners (also known locally as Lee House Surgery) is situated in Windsor. The practice is located in a converted premises with limited car parking for patients and staff. The premises is grade II listed building so the practice is limited in the structural changes of the building. All patient services are offered on the lower ground, ground and first floors. The practice comprises of three consulting rooms, three treatment rooms, two patient waiting areas, a reception area, administrative and management office.

The practice has core opening hours from 8am to 6.30pm Monday to Friday. The practice has offered range of scheduled appointments to patients every weekday from 8am to 5.30pm including open access appointments with a duty GP throughout the day. Extended hours appointments are available at the premises every Wednesday morning from 7am to 8am. In addition, the practice has offered extended hours appointments Monday to Friday from

6.30pm to 9pm, and every Saturday from 9am to 12pm and Sunday from 2pm to 7pm at Kings Edward Hospital and Saint Marks Hospital (funded by Prime Minister's Access Fund).

The practice had a patient population of approximately 7,050 registered patients. The practice population of patients aged between 0 to 4, 10 to 24 and 55 to 64 years old are lower than national average and there are a higher number of patients aged between 30 to 54 years and aged above 75 years old compared to national average.

Ethnicity based on demographics collected in the 2011 census shows the patients population is predominantly White British and 11% of the population is composed of patients with an Asian, Black or mixed background. The practice is located in a part of Windsor with the lowest levels of income deprivation in the area.

There are two GP partners, three salaried GPs, two long term locum GPs and a trainee GP at the practice. Six GPs are male and two female. The practice employs four practice nurses and a health care assistant. The practice manager is supported by a team of administrative and reception staff. Services are provided via a General Medical Services (GMS) contract (GMS contracts are negotiated nationally between GP representatives and the NHS). This is a training practice, doctor who is training to be qualified as a GP has access to a senior GP throughout the day for support. GP Registrars are qualified doctors who undertake additional training to gain experience and higher qualifications in general practice and family medicine. We received positive feedback from the trainee GP we spoke with.

Services are provided from following location:

Detailed findings

Lee House Surgery

84 Osborne Road

Windsor

SL4 3EW

The practice has opted out of providing out of hours services to their patients. There are arrangements in place for services to be provided when the surgery is closed and these are displayed at the practice, in the practice information leaflet and on the patient website. Out of hours services are provided during protected learning time by East Berkshire Primary Care service or after 6:30pm, weekends and bank holidays by calling NHS 111.

Why we carried out this inspection

We inspected this service as part of our new comprehensive inspection programme.

We carried out a comprehensive inspection of this service under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. The inspection was planned to check whether the provider is meeting the legal requirements and regulations associated with the Health and Social Care Act 2008, (Regulated Activities) Regulations 2014, to look at the overall quality of the service, and to provide a rating for the service under the Care Act 2014.

How we carried out this inspection

Prior to the inspection we contacted the Windsor, Ascot and Maidenhead Clinical Commissioning Group (CCG), NHS England area team and local Healthwatch to seek their feedback about the service provided by Dr Jabbar and Partners. We also spent time reviewing information that we hold about this practice including the data provided by the practice in advance of the inspection.

The inspection team carried out an announced visit on 15 June 2016. During our visit we:

- Spoke with eight staff and 10 patients who used the service.
- Observed how patients were being cared for and talked with carers and/or family members.
- Reviewed the personal care or treatment records of patients.
- Reviewed comment cards where patients and members of the public shared their views and experiences of the service.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?
- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

We also looked at how well services are provided for specific groups of patients and what good care looks like for them. The population groups are:

- Older people.
- People with long-term conditions.
- Families, children and young people.
- Working age people (including those recently retired and students).
- People whose circumstances may make them vulnerable.
- People experiencing poor mental health (including people with dementia).

Please note that when referring to information throughout this report, for example any reference to the Quality and Outcomes Framework data, this relates to the most recent information available to the CQC at that time.

Are services safe?

Our findings

Safe track record and learning

There was an effective system in place for reporting and recording significant events.

- Staff told us they would inform the practice manager of any incidents and there was also a recording form available on the practice's computer system.
- We reviewed records of 51 significant events and incidents that had occurred during the last year. There was evidence that the practice had learned from significant events and implementing change was clearly planned. For example, following a significant event the practice had revised their confidentiality protocol and advised all staff to follow the guidelines to ensure NHS email accounts should be used for communication regarding practice matters.
- We reviewed safety records, incident reports, national patient safety alerts and minutes of meetings where these were discussed. Significant events were a standing item on the practice meeting agenda. Lessons were learnt from significant events and communicated widely to support improvement including sharing with other local practices.

Overview of safety systems and processes

The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse, which included:

- Arrangements were in place to safeguard children and vulnerable adults from abuse that reflected relevant legislation and local requirements and policies were accessible to all staff. The policies clearly outlined who to contact for further guidance if staff had concerns about a patient's welfare. There was a lead member of staff for safeguarding. The GPs attended safeguarding meetings when possible and always provided reports where necessary for other agencies. Staff demonstrated they understood their responsibilities and all had received training relevant to their role. For example, GPs were trained to Safeguarding Children level three, nurses were trained to Safeguarding Children level two and both GPs and nurses had completed adult safeguarding training.
- A notice was displayed in the waiting room and consulting rooms, advising patients that clinical staff

would act as a chaperone, if required. All staff who acted as a chaperone were trained for the role and had received a disclosure and barring check (DBS). (DBS checks identify whether a person has a criminal record or is on an official list of people barred from working in roles where they may have contact with children or adults who may be vulnerable).

- Appropriate standards of cleanliness and hygiene were followed. We observed the premises to be clean and tidy. A practice nurse was the infection control lead who liaised with the local infection prevention teams to keep up to date with best practice. There was an infection control protocol in place and all staff had received up to date training. Annual infection control audits were undertaken and we saw evidence that action was taken to address any improvements identified as a result.
- We checked medicines kept in the treatment rooms, medicine refrigerators and found they were stored securely (including obtaining, prescribing, recording, handling, storing and security). Processes were in place to check medicines were within their expiry date and suitable for use. Regular medicine audits were carried out to ensure the practice was prescribing in line with best practice guidelines for safe prescribing. Prescription pads were securely stored and there were systems in place to monitor their use. Patient Group Directions (PGDs) had been adopted by the practice to allow nurses to administer medicines in line with legislation. The practice had a system for production of Patient Specific Directions to enable Health Care Assistant to administer vaccines.
- There was a policy for ensuring that medicines were kept at the required temperatures, which described the action to take in the event of a potential failure. Records showed fridge temperature checks were carried out daily.
- Recruitment checks were carried out and the five staff files we reviewed showed that appropriate checks had been undertaken prior to employment. For example, Disclosure and Barring Service (DBS) checks, proof of identification, references, qualifications and registration with the appropriate professional body.

Monitoring risks to patients

Risks to patients were assessed and well managed.

- There were procedures in place for monitoring and managing risks to patient and staff safety. There was a

Are services safe?

health and safety policy available. The practice had an up to date fire risk assessment in place and they were carrying out fire safety checks. This included carrying out regular smoke alarm checks. Fire drills were started in June 2016, shortly before the inspection.

- A health and safety assessment had been carried out by an external contractor on 11 May 2016. The health and safety assessment had identified six high risk areas and recommended urgent actions. We had advised the practice to take immediate action to ensure the health and safety in the premises. The practice was proactive, developed and implemented a written action plan and undertaken necessary tasks within 48 hours after the inspection.
- All electrical and clinical equipment was checked to ensure it was safe. The practice also had a variety of other risk assessments in place to monitor safety of the premises such as control of substances hazardous to health and infection control and legionella (a bacterium which can contaminate water systems in buildings).
- Staff told us there were usually enough staff to maintain the smooth running of the practice and there were always enough staff on duty to keep patients safe. The practice manager showed us records to demonstrate that actual staffing levels and skill mix met planned staffing requirements.

Arrangements to deal with emergencies and major incidents

The practice had adequate arrangements in place to respond to emergencies and major incidents.

- There was an instant messaging system on the computers in all the consultation and treatment rooms which alerted staff to any emergency.
- All staff received annual basic life support training and there were emergency medicines available in the treatment room.
- The practice had a defibrillator available on the premises and oxygen with adult mask. A first aid kit and accident book were available.
- Emergency medicines were easily accessible to staff in a secure area of the practice and all staff knew of their location. All the medicines we checked were in date and fit for use.
- The practice had a comprehensive business continuity plan in place for major incidents such as power failure or building damage. The plan included emergency contact numbers for staff.

Are services effective?

(for example, treatment is effective)

Our findings

Effective needs assessment

The practice assessed needs and delivered care in line relevant and current evidence based guidance and standards, including National Institute for Health and Care Excellence (NICE) best practice guidelines.

- The practice had systems in place to keep all clinical staff up to date. Staff had access to guidelines from NICE and used this information to deliver care and treatment that met patients' needs.
- The practice monitored that these guidelines were followed through risk assessments, audits and random sample checks of patient records.

Management, monitoring and improving outcomes for people

The practice used the information collected for the Quality Outcomes Framework (QOF) and performance against national screening programmes to monitor outcomes for patients. (QOF is a system intended to improve the quality of general practice and reward good practice). In 2014-15, the practice had achieved 99% of the total number of points available, compared to 97% locally and 95% nationally, with 8% exception reporting. The level of exception reporting was lower than the CCG average (9%) and the national average (9%). Exception reporting is the percentage of patients who would normally be monitored but had been exempted from the measures. These patients are excluded from the QOF percentages as they have either declined to participate in a review, or there are specific clinical reasons why they cannot be included.

Data from 2014-15 showed;

- Performance for mental health related indicators was better than the CCG and national average. The practice had achieved 100% of the total number of points available, compared to 96% locally and 93% nationally.
- Performance for diabetes related indicators was better than the CCG and national average. The practice had achieved 99% of the total number of points available, compared to 94% locally and 89% nationally.

- The percentage of patients with hypertension having regular blood pressure tests was comparable to the CCG and national average. The practice had achieved 82% of the total number of points available, compared to 83% locally and 84% nationally.

Clinical audits were carried out to demonstrate quality improvement and all relevant staff were involved in improving care and treatment and patient outcomes.

- The practice had carried out number of repeated clinical audits cycles. We checked seven clinical audits completed in the last two years, where the improvements made were implemented and monitored.
- The practice participated in applicable local audits, national benchmarking and accreditation.
- Findings were used by the practice to improve services. For example, we saw evidence of repeated audit cycle of patients with prostate (a gland in the male reproductive system) cancer.
- The aim of the audit was to identify and ensure all patients with prostate cancer had blood tests carried out in the last 12 months to measure the amount of prostate specific antigen (PSA). Antigen was responsible for the production of antibodies and induced an immune response in the body. The first audit demonstrated that 70% patients with prostate cancer had their PSA measured. The practice reviewed their protocol and invited patients for blood tests. We saw evidence that the practice had carried out follow up audit which demonstrated improvements in patient outcomes and found 100% patients had their PSA measured.

Effective staffing

Staff had the skills, knowledge and experience to deliver effective care and treatment.

- The practice had a staff handbook for newly appointed non-clinical members of staff that covered such topics as safeguarding, fire safety, health and safety and confidentiality.
- The learning needs of staff were identified through a system of appraisals, meetings and reviews of practice development needs. Staff had access to appropriate training to meet these learning needs and to cover the scope of their work. This included ongoing support

Are services effective?

(for example, treatment is effective)

during one-to-one meetings, appraisals, coaching, mentoring, clinical supervision and facilitation and support for the revalidation of doctors. All staff had received an appraisal within the last 12 months.

- Staff received training that included: safeguarding children and adults, fire safety, basic life support, health and safety and equality and diversity. Staff had access to and made use of e-learning training modules and in-house training.

Coordinating patient care and information sharing

The information needed to plan and deliver care and treatment was available to relevant staff in a timely and accessible way through the practice's patient record system and their intranet system.

- This included care and risk assessments, care plans, medical records and investigation and test results. Information such as NHS patient information leaflets were also available.
- The practice shared relevant information with other services in a timely way, for example when referring patients to other services.

Staff worked together and with other health and social care services to understand and meet the range and complexity of patients' needs and to assess and plan ongoing care and treatment. This included when patients moved between services, including when they were referred, or after they were discharged from hospital. The practice had identified 139 patients who were deemed at risk of admissions and 97% of these patients had care plans been created to reduce the risk of these patients needing admission to hospital. We saw evidence that multi-disciplinary team meetings took place on a monthly basis and that care plans were routinely reviewed and updated.

Consent to care and treatment

Staff sought patients' consent to care and treatment in line with legislation and guidance.

- Staff understood the relevant consent and decision-making requirements of legislation and guidance, including the Mental Capacity Act 2005.
- When providing care and treatment for children and young patients, staff carried out assessments of capacity to consent in line with relevant guidance.

- Where a patient's mental capacity to consent to care or treatment was unclear the GP or practice nurse assessed the patient's capacity and, where appropriate, recorded the outcome of the assessment.
- The provider informed us that verbal consent was taken from patients for routine examinations and minor procedures and recorded in electronic records. The provider informed us that written consent forms were completed for more complex procedures.
- All clinical staff demonstrated a clear understanding of the Gillick competency test. (These are used to help assess whether a child under the age of 16 has the maturity to make their own decisions and to understand the implications of those decisions).

Supporting patients to live healthier lives

Patients who may be in need of extra support were identified by the practice.

- These included patients receiving end of life care, carers, those at risk of developing a long-term condition and those wishing to stop smoking. Patients were signposted to the relevant external services where necessary such as local carer support group.
- The practice was offering opportunistic smoking cessation advice and patients were signposted to a local support group. For example, information from Public Health England showed 84% of patients (15+ years old) who were recorded as current smokers had been offered smoking cessation support and treatment in last 24 months. This was comparable to the CCG average (86%) and to the national average (86%).

The practice's uptake for the cervical screening programme was 85%, which was above the national average of 82%. There was a policy to offer text message reminders for patients about appointments. The practice also encouraged its patients to attend national screening programmes for bowel and breast cancer screening. In total 53% of patients eligible had undertaken bowel cancer screening and 71% of patients eligible had been screened for breast cancer, compared to the national averages of 58% and 72% respectively. The practice provided us recent data which had shown improvement and the practice's uptake for the breast cancer screening programme was 74% in 2015-16.

Childhood immunisation rates for the vaccines given were higher than the CCG averages. For example:

Are services effective?

(for example, treatment is effective)

- Childhood immunisation rates for the vaccines given in 2014/15 to under two year olds ranged from 88% to 95%, these were higher than the CCG averages which ranged from 84% to 95%.
- Childhood immunisation rates for vaccines given in 2014/15 to five year olds ranged from 91% to 99%, these were higher than the CCG averages which ranged from 85% to 96%.

Patients had access to appropriate health assessments and checks. These included health checks for new patients and NHS health checks for patients aged 40–74. Appropriate follow-ups on the outcomes of health assessments and checks were made, where abnormalities or risk factors were identified.

Are services caring?

Our findings

Kindness, dignity, respect and compassion

We observed members of staff were courteous and very helpful to patients and treated them with dignity and respect.

- Curtains were provided in consulting rooms to maintain patients' privacy and dignity during examinations, investigations and treatments.
- We noted that consultation and treatment room doors were closed during consultations; conversations taking place in these rooms could not be overheard.
- Reception staff knew when patients wanted to discuss sensitive issues or appeared distressed they could offer them a private room to discuss their needs.

All of the 45 patient CQC comment cards we received were positive about the service experienced. Patients said they felt the practice offered an excellent service and staff were helpful, caring and treated them with dignity and respect.

We also spoke with one member of the patient participation group (PPG). They also told us they were satisfied with the care provided by the practice and said their dignity and privacy was respected. Comment cards highlighted that staff responded compassionately when they needed help and provided support when required.

Results from the national GP patient survey showed patients felt they were treated with compassion, dignity and respect. The practice was mostly above the CCG average and the national average for most of its satisfaction scores on consultations with GPs and nurses. For example:

- 90% of patients said the GP gave them enough time compared to the CCG average of 86% and national average of 87%.
- 94% of patients said the GP was good at listening to them compared to the CCG average of 90% and national average of 89%.
- 97% of patients said they had confidence and trust in the last GP they saw compared to the CCG average of 96% and national average of 95%.
- 84% of patients said the last GP they spoke to was good at treating them with care and concern compared to the CCG average of 85% and national average of 85%.

- 94% of patients said the last nurse they spoke to was good at treating them with care and concern compared to the CCG average of 92% and national average of 91%.
- 97% of patients said they found the receptionists at the practice helpful compared to the CCG average of 85% and national average of 87%.

The one PPG member and 10 patients we spoke to on the day informed us that they were satisfied with both clinical and non-clinical staff at the practice.

We saw friends and family test (FFT) results for last four months and 95% patients were likely or extremely likely recommending this practice.

Care planning and involvement in decisions about care and treatment

Patients we spoke with told us that health issues were discussed with them and they felt involved in decision making about the care and treatment they received. They also told us they felt listened to and supported by staff and had sufficient time during consultations to make an informed decision about the choice of treatment available to them. Patient feedback on the comment cards we received was also positive and aligned with these views.

Results from the national GP patient survey we reviewed showed some patients responded less positively to questions about their involvement in planning and making decisions about their care and treatment and results were mixed to the CCG average and the national average. For example:

- 85% of patients said the last GP they saw was good at explaining tests and treatments compared to the CCG average of 85% and national average of 86%.
- 92% of patients said the last nurse they saw was good at explaining tests and treatments compared to the CCG average of 90% and national average of 90%.
- 75% of patients said the last GP they saw was good at involving them in decisions about their care compared to the CCG average of 81% and national average of 82%.
- 86% of patients said the last nurse they saw was good at involving them in decisions about their care compared to the CCG average of 85% and national average of 85%.

Staff told us that translation services were available for patients who did not have English as a first language. We saw notices in the reception areas informing patients this service was available.

Are services caring?

Patient and carer support to cope emotionally with care and treatment

Notices in the patient waiting room told patients how to access a number of support groups and organisations.

The practice's computer system alerted GPs if a patient was also a carer. There was a practice register of 138 patients (2% of the practice patient population list size) who were carers and they were being supported, for example, by offering health checks and referral for social services support. One of the practice staff was nominated as a carers champion. Written information was available for

carers to ensure they understood the various avenues of support available to them. The practice website also offered additional services including counselling. Comment cards highlighted that staff responded compassionately when patients needed help and provided support when required.

Staff told us that if families had suffered bereavement, their usual GP contacted them or sent them a sympathy card. This was either followed by a patient consultation at a flexible time and location to meet the family's needs and/or by giving them advice on how to find a support service.

Are services responsive to people's needs?

(for example, to feedback?)

Our findings

Responding to and meeting people's needs

We found the practice was responsive to patient's needs and had systems in place to maintain the level of service provided. The demands of the practice population were understood and systems were in place to address identified needs in the way services were delivered. The practice offered an open booking system for chronic disease management in order to promote flexible appointments. Many services were provided from the practice including diabetic clinics, mother and baby clinics and a family planning clinic. The practice worked closely with health visitors to ensure that patients with babies and young families had good access to care and support. Services were planned and delivered to take into account the needs of different patient groups and to help provide ensure flexibility, choice and continuity of care. For example;

- There were longer appointments available for patients with a learning disability.
- Home visits were available for older patients and patients who would benefit from these.
- Same day and urgent access appointments were available for children and those with serious medical conditions.
- Patients were able to receive travel vaccinations.
- There were disabled facilities, a hearing induction loop and translation services available. However, the practice did not provide a low level desk at the front reception and the front door used to enter the practice did not have an automatic door activation system.
- The practice was proactive in monitoring and managing appointments for patients every month. The practice had carried out demand and capacity audit to identify trends and demands for appointments on specific days and reviewed their appointment system.
- Patient's individual needs and preferences were central to the planning and delivery of tailored services. Services were flexible, provided choice and ensured continuity of care, for example, telephone consultations were available for patients that chose to use this service.
- The practice was one of the pioneers of elderly surveillance in the CCG area and had a dedicated nurse care coordinator for older patients.

- Anti-coagulation clinic (An anti-coagulant is a medicine that stops blood from clotting) was offered onsite, meaning 77 patients who required this service did not have to travel to local hospitals.
- The practice had organised an obesity and diabetes awareness talking session in partnership with The Princess Margaret Hospital delivered by external specialist practitioners.
- The practice website was well designed, clear and simple to use featuring regularly updated information. The website also allowed registered patients to book online appointments and request repeat prescriptions.
- Female patients of child bearing age benefitted from a flexible and accessible contraceptive service. Appointments, where coils and implant devices could be fitted were available including outside of school hours.

Access to the service

The practice was open from 8am to 6:30pm Monday to Friday. The practice was closed on bank and public holidays and patients were advised to call NHS111 for assistance during this time. The practice offered range of scheduled appointments to patients every weekday from 8am to 5.30pm including open access appointments with a duty GP throughout the day. In addition to pre-bookable appointments that could be booked up to four weeks in advance, urgent appointments were also available for patients that needed them. The practice opened for extended hours appointments at the premises every Wednesday morning from 7am to 8am. In addition, the practice offered extended hours appointments Monday to Friday from 6:30pm to 9pm, and every Saturday from 9am to 12pm and Sunday from 2pm to 7pm at Kings Edward Hospital and Saint Marks Hospital (funded by Prime Minister's Access Fund).

Results from the national GP patient survey showed that patient's satisfaction with how they could access care and treatment were below to the CCG average and the national average in some areas. For example:

- 66% of patients were satisfied with the practice's opening hours compared to the CCG average of 69% and national average of 75%.
- 32% of patients said they always or almost always see or speak to their preferred GP compared to the CCG average of 54% and national average of 59%.

Are services responsive to people's needs?

(for example, to feedback?)

However, the result were above the CCG average and the national average for:

- 94% of patients said they could get through easily to the practice by phone compared to the CCG average of 74% and national average of 73%.

The practice was aware of poor national GP survey results and they had taken steps to address the issues. For example;

- The practice had introduced an online appointment system and pre-bookable GPs appointments were available to book online.
- The practice had reviewed appointment booking system and telephone consultation appointments with GPs had been introduced.
- The practice was offering extended hours appointments. We saw these extended hours appointments were advertised on the practice website and was displayed in the waiting area.
- The one PPG member and 10 patients we spoke with on the day informed us they were satisfied with appointment booking system and were able to get appointments with their preferred GP when they needed them.
- We checked the online appointment records of three GPs and noticed that the next pre-bookable appointments with named GPs were available within two weeks and with a duty GP within one week. Urgent appointments with GPs or nurses were available the same day.

Listening and learning from concerns and complaints

The practice had a system in place for handling complaints and concerns.

- The complaints policy and procedures were in line with recognised guidance and contractual obligations for GPs in England.
- There was a designated responsible person who handled all complaints in the practice.
- We saw that information was available to help patients understand the complaints system. The complaints procedure was available from reception, detailed in the patient leaflet and on the patient website. Staff we spoke with were aware of their role in supporting patients to raise concerns. Patients we spoke with were aware of the process to follow if they wished to make a complaint. None of the patients we spoke with had ever needed to make a complaint about the practice.

We looked at 18 complaints received in the last 12 months and found that all written complaints had been addressed in a timely manner. When an apology was required this had been issued to the patient and the practice had been open in offering complainants the opportunity to meet with either the manager or one of the GPs. We saw the practice had not always included necessary information of the complainant's right to escalate the complaint to the Ombudsman if dissatisfied with the response. However, the Ombudsman details were included in complaints policy, on the practice website and a practice leaflet.

Lessons were learnt from concerns and complaints and action was taken to as a result to improve the quality of care.

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

Our findings

Vision and strategy

The practice had a clear vision to deliver high quality patient centred care and promote good outcomes for patients.

- The practice had a mission statement which included to provide high quality patient centred care through clinical excellence, patient engagement and patient choice.
- We found details of the aims and objectives were part of the practice's statement of purpose and strategy. The practice aims and objectives included to provide excellent personalised care and involve patients in decision making process by working together as a team and create a learning organisation. This also included treating patients with dignity and respect.
- The practice had a robust strategy and supporting strategic business plans which reflected the vision and values and were regularly monitored.

Governance arrangements

The practice had an overarching governance framework which supported the delivery of the strategy and good quality care. This outlined the structures and procedures in place and ensured that:

- There was a clear staffing structure and that staff were aware of their own roles and responsibilities.
- Practice specific policies were implemented and were available to all staff. The practice had developed an interactive desktop to share the practice policies and records.
- Staff had a comprehensive understanding of the performance of the practice.
- Audits were undertaken and we saw seven completed audit cycles, which were used to monitor quality and to make improvements.
- There were robust arrangements for identifying, recording and managing risks, issues and implementing mitigating actions.

All staff we spoke with had a comprehensive understanding of the governance arrangements and performance of the practice.

Leadership and culture

The partner and GPs in the practice prioritised safe, high quality and compassionate care. They were visible in the practice and staff told us that they were approachable and always took time to listen to all members of staff. Staff told us there was an open and relaxed atmosphere in the practice and there were opportunities for staff to meet for discussion or to seek support and advice from colleagues. Staff said they felt respected, valued and supported, particularly by the partners and management in the practice.

The practice was aware of and complied with the requirements of the Duty of Candour. The GPs encouraged a culture of openness and honesty. The practice had systems in place for knowing about notifiable safety incidents.

When there were significant safety incidents:

- The practice gave affected patients reasonable support, truthful information and a verbal and written apology.
- They kept written records of verbal interactions as well as written correspondence.

There was a clear leadership structure in place and staff felt supported by management.

- Staff told us that the practice held regular team meetings.
- Staff told us that there was an open culture within the practice and they had the opportunity to raise any issues at team meetings and confident in doing so and felt supported if they did.
- Staff said they felt respected, valued and supported, particularly by the partners in the practice. All staff were involved in discussions about how to run and develop the practice, and the partners encouraged all members of staff to identify opportunities to improve the service delivered by the practice.

Seeking and acting on feedback from patients, the public and staff

The practice encouraged and valued feedback from patients, proactively gaining patients' feedback and engaging patients in the delivery of the service.

- It had gathered feedback from patients through the patient participation group (PPG) and through surveys including friends and family tests and complaints received. There was an active PPG which met on a regular basis, supported patient surveys and submitted

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

proposals for improvements to the practice management team. For example, the practice appointment system had been reviewed, furniture was changed and improvements to the layout of notices in the waiting room were made following feedback from the PPG.

- The practice had also gathered feedback from staff through staff meetings, appraisals and discussion. We saw that appraisals were completed in the last year for staff. Staff told us they felt involved and engaged to improve how the practice was run.

Continuous improvement

- There was a strong focus on continuous learning and improvement at all levels within the practice. For example, we saw nurses were allowed to attend regular training session organised by CCG.
- A salaried GP had completed a postgraduate certificate in clinical education and planning to undertake additional duties as a GP trainer.
- We saw nurses were supported to attend further training in asthma, minor illness, care planning and family planning courses.
- The practice had agreed to sponsor the nurse to complete a diabetic training course and shadowing sessions with a senior nurse in the practice were already planned.
- We saw a senior practice nurse was due to start a clinical supervision training course.
